Nineteenth-century French organ music attracts an ever-increasing number of performers and devotees. The music of Cesar Franck and other distinguished composers-Boly, Guilmant, Widor-and the impact upon this repertoire of the organ-building achievements of Aristide Cavaill-Coll, are here explored through stylistic analysis, the study of the compositional process, and the exploration of how ideas about organ technique and performance practice traditions developed and became codified. New consideration is also given to the political and cultural contexts within which Franck and other French organist-composers worked.

Excellent scholarship; highly recommended for all academic collections. --ChoiceLawrence Archbold and William J. Peterson have amassed the quintessential scholarly compendium. . . . For recitalists, informed teachers, and students of the Romantic period, this is required reading and study. --American OrganistAn enormous amount of scholarly investigation has gone into this volume. . . a thoroughly admirable piece of work. --Music LettersFrom the Back CoverIn Europe and America alike, nineteenth-century French organ music continues to attract performers and devotees. This volume contains contributions by many of the most prominent scholars and performer-scholars dealing with this fascinating repertoire. In their essays, nearly all previously unpublished or unavailable in English translation, they examine selected parts of this varied repertoire through stylistic analysis, the study of compositional process, and the exploration of how ideas about organ technique and performance-practice traditions developed and became codified. New consideration is also given to the political and cultural contexts within which French organist-composers worked.About the AuthorContributors: Kimberley Marshall, William J.
