**Stuart DeLuca : Instructional Video** before purchasing it in order to gage whether or not it would be worth my time, and all praised Instructional Video:

A handy and thorough guide to the design, development, and production of videos for teaching purposes.

From Library JournalDeLuca, a public access TV producer in Texas, has written a concise how-to manual of instructional video, aimed at teachers and others who know nothing about video. In straightforward language, he covers the entire process, from developing the program to screenplay to production and after, including a couple of chapters on basic video technology and hardware. Appended are a storyboard (script), glossary, and bibliography.- David Bartholomew, NYPLCopyright 1990 Reed Business Information, Inc.
